Atos Unify Academy

DLS multinode installation with database mirroring

Course code DLSMNINSDS

Target Group   Service

Course language	Delivery type	Duration
English	WBT	40 min.

Course description

In this training you will learn how the Unify Deployment Service can be set up as a multinode installation with database mirroring. This will be shown with an example environment which consists of two DLS frontend servers, one network share and three databases. You will learn how to deploy this environment, which includes a Network Load Balancer that distributes queries to both nodes of the DLS. A witness is used for the database mirroring. In the last part it is shown how to access the DLS interface.

Learning Target

In this training you will learn how the Unify Deployment Service can be set up as a multinode installation with database mirroring.

Prerequisites

Basic DLS knowledge

Contents

Overview

SQL installation

SQL Native Client installation

DLS frontend 1 installation

DLS frontend 2 installation

Database mirroring

Installation and configuration of the Network Load Balancer

Access to the DLS interface

Curricula

This course is part of following curricula

- [Curriculum for Unify OpenScape Deployment Service (DLS)](#)

Comments
